Education

SRM Institute of Science and Technology

Aug 2022 – May 2026

Bachelor of Technology in Computer Science Engineering

CGPA: 8.1/10

Relevant Coursework: DSA, OOP, OS, Computer Networks, DBMS, Machine Learning, Artificial Intelligence

Technical Skills

Programming: Python, Java, C++, SQL

AI & ML: Transformers, PyTorch, TensorFlow, Generative AI, LLM Fine-Tuning, RAG, AI Agents, Computer Vision

Backend & Data: FastAPI, Flask, REST APIs, ETL, PostgreSQL, MySQL, Vector DBs

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Git, Linux

Frameworks & Tools: Streamlit, CustomTkinter, React, Firebase, Tableau, Power BI

Experience

Ernst & Young (EY)

Jun 2025 – Jul 2025

Software Development Intern

- Built a Python-based decision support application to evaluate Sustainable Development Goal (SDG) indicators across districts, enabling automated identification of underperforming metrics.
- Implemented forecasting models and scoring algorithms using historical trends and 2030 targets, reducing manual analysis for policy evaluation.
- Integrated LLM-assisted report generation and conversational insights, improving accessibility of analytical results for non-technical stakeholders.

KPMG India

Mar 2024 – Sep 2024

Data Engineer Intern

- Built Python ETL pipelines using Azure and government APIs to automate extraction, transformation, and validation of GST datasets.
- Automated anomaly detection and secure reporting workflows, improving data quality while reducing manual preprocessing.

Projects

NoteStop – LLM-based Educational Assistant

Python, TinyLlama, Transformers, NLP, Streamlit

- Fine-tuned TinyLlama on a custom dataset containing approximately **1.6 million tokens** to improve question answering, summarization, notes generation, and cheatsheet creation.
- Built an interactive desktop application integrating Transformer-based inference and prompt engineering for educational assistance.
- Benchmarked model performance against GPT-2, BERT, T5, Mistral, and DeepSeek to guide deployment and model selection.

WildGuard – Real-Time Human-Wildlife Conflict Detection System

Python, PyTorch, NVIDIA Jetson Xavier NX, ESP32, Computer Vision

- Built an Edge AI pipeline combining MegaDetector and SpeciesNet to detect human-wildlife conflict scenarios on NVIDIA Jetson Xavier NX.
- Designed co-occurrence reasoning and ESP32-based response logic to reduce false alarms while enabling automated visual and acoustic deterrence.
- Achieved **94.8% precision**, **92.5% recall**, and approximately **200 ms** end-to-end inference latency.

DreamSketch – Generative AI Dream Visualization System

Python, PyTorch, Stable Diffusion, Hugging Face Diffusers, CustomTkinter

- Built a desktop application that transforms natural language dream descriptions into images using Stable Diffusion and Hugging Face Diffusers.
- Optimized GPU inference using FP16 precision and designed an interactive CustomTkinter interface for prompt-driven image generation.
- Documented the implementation and system architecture in an IEEE-style research paper on AI-assisted dream visualization.

Certifications

Scaler Topics – Master Computer Networking — National University of Singapore – Big Data Analytics Using Deep Learning (Grade A) — NVIDIA Deep Learning Fundamentals — Oracle APEX Foundations
